

User Manual — KNMP VisitHub

Document Title: User Manual **System:** KNMP VisitHub — A Web-Based Booking and Visit Planning System for the Kwame Nkrumah Memorial Park **Author:** Manus AI **Date:** August 2026
Revision: 1.0

1. About This Manual

This manual explains how to use KNMP VisitHub from the perspective of its two user groups: **visitors**, who plan and book their trips, and **administrators**, who manage the park's content, bookings, staff accounts, and reporting. Open the application in any modern browser; the public site and the admin dashboard share the same login.

2. Signing In

Click **Sign in** in the top navigation. You will be redirected to the Manus sign-in page; complete the sign-in there and you return to the site automatically. If your account has been deactivated by an administrator, sign-in to protected features will be refused until reactivation. Your role (visitor or administrator) is assigned by an administrator and takes effect immediately.

3. Visitor Guide

3.1 Exploring Attractions

Select **Explore** in the navigation to open the Attractions Explorer. Use the search box to find attractions by name or description, and click the category or location pills to filter the list; each pill shows a live count of matching attractions. Click any attraction card to read its full description, view its images, opening hours, and location.

3.2 Making a Booking

Select **Book a Visit**. The booking form works as follows.

Step	What to Do
1	Pick a visit date in the calendar. For a multi-day visit, pick the range (start and end date). The summary panel shows a capacity banner : green when availability is comfortable, amber when the day is projected above the park's warning threshold (75% of daily capacity by default), and red when the day is over capacity or your party would exceed the remaining places.
2	For each attraction, optionally reserve a guided-tour time slot.
3	Choose visitor categories (for example, Adult, Child, Student) and quantities. The total cost updates live in Cedis.
4	Add your party name, contact email, and phone, plus any notes, then confirm.

On confirmation you receive a unique booking reference in the form **KNMP-XXXXXX** and a downloadable PDF ticket with a QR code. The ticket is also emailed to your registered address automatically.

3.3 Managing Bookings

Open **My Bookings** to see every booking you have made. Each row shows the reference, dates, status (pending, confirmed, cancelled), and the check-in state recorded at the gate. From here you can download the ticket again or cancel a pending booking. Cancelling a confirmed booking requires an administrator.

3.4 Planning Your Itinerary

Open **Itinerary** to build a personal visit plan. Add attractions from the explorer, set planned times and notes for each item, and reorder them with the drag handles. When your plan is ready, choose **Export PDF** for a printable version or **Share** to create a public link you can send to travel companions; you can revoke a shared link at any time.

4. Administrator Guide

Sign in with an administrator account and open the admin dashboard from the navigation. The sidebar provides nine work areas.

4.1 Overview, Attractions, and Categories

The **Overview** page summarises current bookings, revenue, and visitor counts. **Attractions** and **Visitor Categories** pages let you create, edit, and delete content. Editing an attraction,

category, or booking status automatically records an entry in the audit log.

4.2 Bookings

The **Bookings** page lists every booking with its reference, visitor, dates, amount, and status. Click the status chip to confirm or cancel a booking — the visitor is emailed automatically when the status changes to confirmed or cancelled. Use the filter tabs **All / Checked in / Not checked in** to review arrivals. The **Check-in** column shows the check-in date and time once gate staff have scanned the party's ticket; the gate icon opens the gate page directly.

4.3 Gate Check-in

Open **Gate Check-in** at the park entrance. Press **Start camera** to scan a ticket's QR code; a valid ticket is found and checked in immediately, showing the party's details, and a **Undo** button corrects mistakes. Without a camera, type or paste the `KNMP-XXXXXX` reference into the manual field and press **Look up**, then **Check in**. Cancelled bookings cannot be checked in. Each check-in and undo is recorded in the audit log.

4.4 Analytics

Open **Analytics** to review performance. Choose a date range at the top of the page to filter everything below it: KPI cards (bookings, visitors, revenue), the visitor-category breakdown with an **Export CSV** button (filename includes the chosen range), monthly revenue trends, and the 14-day **Daily visitor forecast**, which spreads multi-day stays evenly and draws the configured daily capacity as a dashed reference line.

4.5 Settings

Open **Settings** to configure park operations: the **daily visitor capacity** (default 500) and the **near-capacity warning threshold** as a percentage (default 75%). These values drive both the public booking-form warnings and the analytics forecast.

4.6 Users and Audit Log

On the **Users** page, list all registered accounts, change roles (an administrator cannot demote themselves), activate or deactivate accounts, and press **Add user** to create a new account by name, email, and role — the new user signs in with their email through the standard Manus sign-in. The **Audit Log** page records every role change, account activation, content edit, status change, gate check-in, and account creation, identifying the administrator responsible.

5. Troubleshooting

Symptom	Likely Cause	Action
Sign-in is refused	Account deactivated	Ask an administrator to reactivate your account
Ticket email not received	Email outbox delay or wrong address	Download the PDF from My Bookings; contact an administrator to correct the contact email
Capacity banner red on chosen date	Day is over capacity or party exceeds remaining places	Pick another date or reduce quantities
QR scan fails at the gate	Poor lighting or distance	Use the manual reference field on the gate page instead
Analytics shows stale numbers	Browser cache	Refresh the page
